

# Your benefits at first view:

- Increased productivity for wrapping your products
- Alternative to "off the shelf" bubble film
- Cuts storage and handling costs by creating bubble film "on demand"
- Quality Perforation - Smart Tear Off:  
This allows the packer to divide the padding cushioning wrap intuitively in one move, without having to search for the perforation.

## Flexible protective packaging solutions from Storopack

With a view to continuously improving the productivity of the protective packaging process, Storopack is looking at four protective packaging solutions:

- 1) "in the box": the best and most effective protection in a box
- 2) "into the box": the most efficient and ergonomic way of placing the protective packaging into a box
- 3) "around the box": the physical and digital integration of the protective packaging process into intra-logistics, taking account of a requirement-orientated automation solution
- 4) "out of the box": the positive unpacking experience

The appropriate key questions (the above graphic) capitalize on all the relevant resources. This holistic approach is part of an on-going process, and leads to the comprehensive and continuous optimization of the customer's protective packaging process – with "Perfect Protective Packaging" being the aim.

# AIRplus® Bubble Film

NEW FROM  
STOROPACK!

# Increased productivity for wrapping with air cushions

AIRplus® Bubble by Storopack is a protective air cushion packaging used for wrapping products. As an alternative to "off the shelf" bubble film, the "on demand" system cuts costs for storage and handling.

Manufactured on compact machines, AIRplus® Bubble is set up as individually integrated and productive protective packaging solution. In keeping with Storopack's "Working Comfort" concept, the packaging material includes a convenient easy tear perforation for ergonomics and speed. This allows the packer to divide the cushioning wrap intuitively without searching for the perforation.

As the first air cushion system of its kind, AIRplus® Bubble offers narrow individual sections, for the efficient wrapping of "small sized" items. From mobile phones to pharmaceutical packaging, the appropriately sized packing material prevents waste of protective packaging. A single section (approx. 14" x 5") contains four separate rows with a total of 29 round chambers.

As a supplier with its own development and production, Storopack has engineered the new air cushion product with a design advantage: the air chamber layout ensures maximum use of the wrap.

Compared to conventional bubble film, AIRplus® Bubble also offers advantages for the recipient. With one cut, the air escapes leaving only a small amount of film for disposal/recycling.

AIRplus® Bubble is available in the tried and tested, Storopack's proven "three layer" CX film quality.

## Protection function of AIRplus® Bubble Cushions:

- Wrapping
